SUMMARY

Software Engineer translating complex business requirements into scalable SaaS products and real-time mobile experiences. Combines expertise in Node.js, Kotlin, and React to architect responsive operational portals, predictive AI features, and synchronized B2B delivery systems.

EDUCATION

B.I.T. Sindri

B.Tech in Computer Science and Engineering | SGPA: 8.42

Aug 2024 – Present

Dhanbad, Jharkhand

TECHNICAL SKILLS

Languages: Java, Kotlin, JavaScript, TypeScript, Python

Frontend: React.js, Tailwind CSS, Material-UI (MUI), Shadcn UI, Android SDK

Backend: Node.js, Bun, Express.js, Prisma, WebSocket

Databases & Security: Firebase Firestore, PostgreSQL, MongoDB, SQL, JWT, OAuth2

Cloud, Tools & APIs: Firebase, Render, Vercel, Railway, Cloudinary, Git, Postman, Gemini API, Mapbox API

EXPERIENCE

Software Development Engineer Intern, ARLOO

May 2026 – Present

- Architected an enterprise-grade operational dashboard using **React**, **TypeScript**, and **Shadcn UI**, optimizing frontend rendering by seamlessly flattening complex nested NoSQL data in-memory.
- Designed a batched NoSQL database schema for historical market rates, reducing Firebase document reads by over **85%** for mobile clients and significantly cutting cloud infrastructure costs.
- Engineered a live Command Center tracking active logistics and Booked GMV, utilizing Firestore **writeBatch** to enable **1-click** automated rate recalibrations across 100% of regional orders.
- Enhanced customer workflows in a production Android app using **Kotlin**, integrating a reward calculation engine, automated redemption logic, and auto-sliding promotional UI.
- Optimized high-volume data pipelines using **RecyclerViews** and lifecycle-aware architecture, establishing a tamper-proof audit trail and improving merchant balance tracking.

PROJECTS

AI Mock Interview Engine | [React](#), [Bun](#), [Express](#), [PostgreSQL](#) | [Live](#) | [GitHub](#)

Jul 2026 – Present

- Engineered a stateless AI mock interview platform utilizing **React**, **Bun**, and **Express**, reconstructing contexts directly from **PostgreSQL** to eliminate server-side session memory overhead by **100%**.
- Integrated **Google Gemini 2.5 Flash** and **Web Speech APIs** for browser-native speech processing, bypassing WebRTC relays to cut dedicated audio infrastructure costs to **0**.
- Developed an automated background pipeline to scrape **GitHub** metadata and evaluate candidate responses, asynchronously generating structured technical feedback reports with **0** manual intervention.

WanderLust | [Node.js](#), [Express](#), [MongoDB](#) | [Live](#) | [GitHub](#)

Jan 2026 – Present

- Architected a vacation accommodation discovery, listing & review platform in **Node.js** and **MongoDB** featuring an advanced search engine capable of parsing **3+** concurrent query dimensions (title, location, category).
- Secured **100%** of protected API endpoints by implementing hybrid authentication via **Passport.js** and **Google OAuth**, utilizing **connect-mongo** to maintain persistent, crash-proof sessions.
- Integrated **Geoapify** for precise geolocation mapping and offloaded **100%** of media storage to **Cloudinary**, eliminating local server payloads and optimizing global asset delivery.

ACHIEVEMENTS & EXTRA-CURRICULARS

- Solved **200+** Data Structures and Algorithms problems across LeetCode and HackerRank.
- Student Coordinator & Technical Aide, ISTE Chapter:** Managed the chapter's technical infrastructure, developed HackerRank coding challenges with custom test cases and evaluation pipelines, spearheaded Triveni Techfest (1000+ participants, 5000+ footfall), and shortlisted 15 members from 600+ applicants for induction.
- Finalist in Hackatron**, a 36-hour national hackathon (**1000+** participants).
